## ***1. Introduction and Objectives***

---

On behalf of the General Electric Company (GE), treatability studies were conducted during 2004 and 2005 to support the design of the remedy selected by the United States Environmental Protection Agency (EPA) to address polychlorinated biphenyls (PCBs) in sediments of the Upper Hudson River, located in New York State. Treatability studies were conducted to provide data to guide equipment selection and sizing during the remedial design, as specified in the *Treatability Studies Work Plan* (TS Work Plan) (Blasland, Bouck & Lee, Inc. [BBL], 2004) approved by EPA on February 13, 2004. The activities described in the TS Work Plan were conducted under an Administrative Order on Consent for Hudson River Remedial Design and Cost Recovery, effective August 18, 2003 (Index No. CERCLA-02-2003-2027) (EPA/GE, 2003).

As described in the TS Work Plan, the objectives of the treatability studies were to provide the data needed to:

- Determine the potential for water quality impacts caused by dredging;
- Develop the sediment dewatering design to meet anticipated landfill acceptance or Beneficial Use Determination requirements;
- Develop the water processing design to provide data relative to achieving discharge requirements; and
- Develop the disposal design to meet anticipated landfill acceptance requirements.

These objectives represent broad design goals. However, because it was not possible to address these goals with absolute precision, the primary goals of the treatability studies were to reasonably reduce uncertainty so that informed design decisions could be made and to validate, on a small scale, performance specifications of processes developed during the remedial design.

The treatability tests that were complete and the results that were available as of May 2005 were documented in the *Treatability Studies Report* (TS Report) (BBL, 2005a), which was appended to the *Phase 1 Intermediate Design Report* (BBL, 2005b) which was approved by EPA on November 1, 2005. However, the treatability study testing continued through the summer and fall of 2005 during the development of the Final Design of Phase 1 of the remedial action. This *Addendum to the Treatability Studies Report* (Addendum) provides documentation of the additional studies and resulting data.

## **2. Treatability Studies Planning**

---

### **2.1 Treatability Studies Work Plan**

Activities conducted during the treatability studies are described in the TS Work Plan and consisted of:

- Collecting samples (sediment and water) from the river and submitting them for pre-treatment characterization;
- Conducting treatability studies to simulate certain unit processes and/or to produce data on the behavior of dredged sediment or associated water subject to these operations; and
- Submitting samples from the treatability studies for analytical and geotechnical testing.

These activities were described in the TS Report for all treatability studies completed as of May 2005. The activities associated with the treatability studies that were completed concurrent with or following submittal of the TS Report are summarized in this Addendum.

### **2.2 Corrective Action Memoranda**

If a significant change to a procedure described in the TS Work Plan was necessary during performance of the treatability studies, a Treatability Studies Corrective Action Memorandum (TS CAM) was submitted to EPA for review and approval. TS CAMs No. 001 through 008 and associated correspondence were included with the TS Report. Since submittal of the TS Report, GE and EPA have exchanged additional correspondence to resolve questions on TS CAM No. 008, which was submitted to EPA on July 8, 2005 and covered additional settling tests and bench-scale filter press test simulations. A copy of this correspondence and TS CAM No. 008 are provided in Exhibit A. To date, EPA has not provided written approval of TS CAMs No. 001, 004, 005, 006, 007, or 008, although EPA has provided verbal approval of TS CAM No. 001.

### **2.3 Duties of Contractors and Laboratories**

BBL and Quantitative Environmental Analysis, LLC (QEA) collected sediment and water samples from the river for the treatability studies. Sample collection and analytical testing from work completed between July 2004 and May 2005 were described in the TS Report.

---

Waste Stream Technology, Inc. (Waste Stream) of Buffalo, New York completed the treatability studies and a portion of the analytical testing conducted between July 2004 and September 2005. The additional treatability studies that were completed between May 2005 and September 2005 are described in this Addendum. Analytical testing for these additional treatability studies were conducted by the following laboratories:

- Northeast Analytical, Inc. (NEA) in Schenectady, New York; and
- Severn Trent Laboratories (STL) in Pittsburgh, Pennsylvania.

The testing performed by each laboratory is summarized in Table 2-1, below.

**Table 2-1 – Analyses Performed by Laboratories**

Laboratory	Analyses Performed
NEA	<ul style="list-style-type: none"><li>• PCBs</li><li>• Total organic carbon (TOC)</li><li>• Total suspended solids (TSS)</li></ul>
STL	<ul style="list-style-type: none"><li>• Mercury</li></ul>
Waste Stream	<ul style="list-style-type: none"><li>• Water content</li><li>• Turbidity</li></ul>

## **3. Treatability Studies Implementation**

---

### **3.1 Additional Treatability Studies Overview**

The treatability studies were a series of unit process-specific tests that provided the data necessary to advance the remedial design. The treatability studies completed since May 2005 and described in this Addendum consisted of:

- Primary Sedimentation Tests;
- Dewatering Polymer Tests; and
- Rapid Small-Scale Column Tests (RSSCTs).

Analytical data tables for these additional treatability studies are presented in Exhibit B. Field logs, including observations and results generated by Waste Stream, are presented in Exhibit C. A complete database of results of chemical analyses conducted during the treatability studies is presented in Exhibit D.

The TS Work Plan required full data validation on 10% of the analytical results for the treatability studies. As presented in the TS Report, full data validation was performed on greater than 10% of the analytical results for the treatability studies. Even with the additional analytical results from the testing described in this Addendum, full data validation has still been performed on greater than 10% of the analytical results for the treatability studies; therefore, additional full data validation for data collected as part of this addendum was not required to meet the requirements of the TS Work Plan.

### **3.2 Primary Sedimentation Tests**

Sedimentation of fresh-water slurries with a concentration less than 100 grams per liter can generally be characterized as “flocculent settling.” As slurry concentrations are increased, the sedimentation process may be characterized as a “zone settling” process, in which a clearly defined interface is formed between the clarified supernatant water and the more concentrated settled material.

The primary sedimentation tests examined the sedimentation of suspended solids under flocculent settling conditions. For the additional settling tests completed between May and September 2005, a 2-liter graduated

---

cylinder was used, as described in TS CAM No. 008. Among the samples tested were overflow (fines) material generated from the hydrocyclone performance testing, and fines from size separation testing.

During the settling tests, observations of the quantity of settled solids at different times using various polymers were recorded. Field log sheets, including visual observations, are included in Exhibit C.

### **3.3 Dewatering Polymer Tests**

As described in the Phase 1 IDR, offloaded sediments will be separated into coarse and fines fractions, and the resulting fines will be mechanically dewatered using a combination of polymer conditioning and filter press treatment. As such, dewatering polymer tests, using the methods described in the TS Work Plan, were conducted to identify the preferred polymer conditioning for the sediments.

For the additional tests completed between May and September 2005, dewatering polymer tests were conducted on samples of settled solids from overflow (fines) material generated from the hydrocyclone performance testing and various fractions from size separation testing. Filter cake samples were tested by Waste Stream for water content using Standard Measurement 2540G. Field log sheets, including the water content results and visual observations, are included in Exhibit C.

### **3.4 Rapid Small-Scale Column Tests**

RSSCTs were conducted to estimate carbon consumption rates and removal efficiencies. In addition, RSSCTs were used to compare the performance of carbon obtained from Calgon Carbon Corporation (Calgon) and NORIT Americas Inc. (NORIT). During the RSSCTs, water was passed through six different column set-ups:

- Single column with Calgon carbon;
- Two columns in series with Calgon carbon;
- Single column with NORIT carbon;
- Two columns in series with NORIT carbon;
- Single blank column; and
- Two blank columns in series.

---

Using these configurations, the RSSCT was able to simulate empty bed contact times of 10 minutes for the single columns and 20 minutes for the double columns. Additionally, the RSSCT simulated approximately 1 month of full-scale operation in only 4 days.

There were several attempts to create RSSCT feed water with PCB concentrations in the 5- to 15-microgram-per-liter range to complete a meaningful test. Ultimately, the material selected for the RSSCT was filtrate generated from sediment category S4B-2<sup>1</sup>. The TS Work Plan specified that the RSSCT was to be conducted for 24 days, which approximated 6 months of full-scale operation. The initial RSSCT was completed in April and May 2005, and included in the TS Report. However, because PCBs did not break through the carbon in this time frame, the RSSCT was extended to 85 days and completed in July 2005. The results from the entire RSSCT are presented in this Addendum.

Samples of effluent water from the six different column set-ups were collected periodically during the course of the RSSCT and analyzed for the following parameters:

- PCBs (Modified Green Bay Mass Balance Method);
- TSS (EPA Method 160.2, with modifications consistent with ASTM Procedure D3977-97, Test Method B – Filtration); and
- TOC (Tekmar Dohrmann).

Samples were also collected from the effluent of each of the six column set-ups and analyzed by Waste Stream for turbidity (EPA Method 180.1). Additionally, samples were periodically collected from all or some of the column set-ups and analyzed for PCBs, and a weekly composite sample of the RSSCT feed water was submitted for analysis of PCBs (EPA Method 608). Finally, one grab sample was collected from the RSSCT feed water and analyzed for total mercury (EPA Method 1631).

During the course of the RSSCTs, analytical testing beyond the requirements of the TS Work Plan was conducted. Some of this additional analytical testing was not conducted on all the column set-ups, but instead was typically focused on the three single columns.

---

<sup>1</sup> Four categories of sediment that represented the anticipated range of sediments in targeted removal areas were identified for use in the treatability studies. Sediments identified as S4B-2 were fine-grained sediments with oils and/or lower bulk density that had the highest PCB concentrations in River Section 1.

---

The analytical results for the RSSCTs are presented in Table 1 in Exhibit B. Field log sheets, including results from Waste Stream and visual observations, are included in Exhibit C.

The RSSCT was modified from the approach specified in the TS Work Plan, and these changes were described in the TS CAMs and correspondence with EPA. The majority of these changes were related to the feed water and analytical testing. TS CAMs No. 001 through 008 and associated correspondence were attached to the TS Report. Additional correspondence between EPA and GE related to questions regarding TS CAM No. 008 is included in Exhibit A.

***Re: Hudson River Treatability Study Work Plan- Corrective Action Memorandum No. 8***

Dear Sir or Madam:

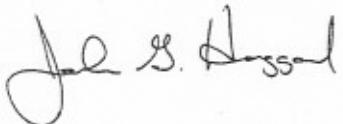

A Corrective Action Memorandum (CAM008) for the Treatability Study Work Plan is attached. This CAM proposes additional settling tests and bench-scale filter press test simulations. We request your prompt approval of this plan. These tests will not extend the schedule for submittal of Phase 1 Intermediate Design or Final Design reports.

If you have any comments or questions, please contact Scott Blaha at (518) 862-2738.

**GENERAL ELECTRIC COMPANY  
HUDSON RIVER DESIGN SUPPORT  
TREATABILITY STUDIES PROGRAM**

**Date:** July 8, 2005

**Organization Name:** Blasland, Bouck & Lee, Inc. (BBL)

**Initiator's Name and Title:** Donald Sauda, Treatability Studies Task Manager

**Problem Description:**

The plan for primary settling testing was provided in the Treatability Studies Work Plan (TSWP, BBL, February 2004) that was approved by USEPA on February 13, 2004. The objective (DQO 4b.(2b) & 4c.(2b)) was to provide information for design of a slurry thickening system.

The slurries that were tested were representative of hydraulically dredged or hydraulically offloaded sediments. Tests were completed with raw slurries; no size separation or chemical conditioning had been done in advance of these initial column studies.

**Reported To:** Scott Blaha, GE

---

**Corrective Action:**

In order to optimize the basis of the thickener design, more testing has been proposed. Samples of hydrocyclone overflow (fines) material will be tested with various coagulants and flocculants. The SOP for the settling tests is attached.

Then, the thickened solids will be dewatered with the plate and frame filter press simulator (TSWP, SOP 14, p.3). These results will be compared with dewatering results from previous tests on hydrocyclone overflow.

The tests are schedule to be started during the week beginning July 11, 2005. Tests are estimated to be completed by August 31, 2005. The data will be used to optimize the thickener design during final design.

**Reviewed and Implemented By:** Don Sauda (BBL)

cc: Amy Toth (Waste Stream)

Attachments:

SOP- Column (2L) Settling Testing

**Attachment 1**  
**Standard Operating Procedure**  
**Column (2L) Settling Test**

1. Agitate slurry in source container so it is well mixed, allowing a representative sample to be taken from the source container. Use mixing equipment appropriate for the container dimensions and slurry size.
2. Without changing the level of agitation in step 1, remove a 2 liter (L) sample from the source container and place the sample in a standard 2 L graduated cylinder.
3. Without changing the level of agitation in step 1, remove a 100 to 250 milliliter (ml) sample from the source container, record weight, dry cake in an approx. 100°C oven for 24 hours and record cake dry weight. Calculate the % wt. total solids of the slurry in the source container and record.
4. Agitate the slurry in the 2 L container using a plunger device so that it is well mixed. The plunger may be a steel rod that is longer than the height of the 2 L graduated cylinder, and to one end has been attached an inverted rubber stopper with diameter slightly less than the inside diameter of the 2 L graduated cylinder.
5. If settling aid is to be added, add the dose of settling aid to the surface of the slurry in the 2 L graduated cylinder and immediately follow with four strokes of the plunger (i.e. down-up-down-up), with each stroke approx. 1 second.
6. Stop agitation with the plunger and record the time of stopping as  $t = 0$ .
7. Record the height of the 'mudline' at approximately 5 second intervals until the change in height is less than roughly 10% per approximately 5 seconds (vs. previous reading). The 'mudline' is the interface between the particle-lean phase and the particle-concentrated phase in the 2 L graduated cylinder.
8. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 10 second intervals until the change in height is less than roughly 10% per 10 seconds (vs. previous reading).
9. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 30 second intervals until the change in height is less than roughly 10% per 30 seconds (vs. previous reading).
10. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 1 minute intervals until the change in height is less than roughly 10% per 1 minute (vs. previous reading).
11. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 2 minute intervals until the change in height is less than roughly 10% per 2 minutes (vs. previous reading).
12. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 5 minute intervals until the change in height is less than roughly 10% per 5 minutes (vs. previous reading).

13. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 10 minute intervals until the change in height is less than roughly 10% per 10 minutes (vs. previous reading).
14. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 30 minute intervals until the change in height is less than roughly 10% per 30 minutes (vs. previous reading).
15. Record the height of the 'mudline' and time elapsed from  $t = 0$  at approximately 1 hour intervals until the total time from  $t = 0$  is 6 hours.
16. Record the height of the 'mudline' and time elapsed from  $t = 0$  when total time from  $t = 0$  is approximately 24 hours.
17. Decant supernatant off of settled solids, recover settled solids, record weight, dry cake in an approx. 100°C oven for 24 hours and record cake dry weight. Calculate the % wt. total solids of the settled solids and record.

**From:** "Blaha, Scott R (Corporate)" <scott.blaha@ge.com>  
**To:** <Conetta.Benny@epamail.epa.gov>  
**Date:** 7/22/2005 6:18:31 PM  
**Subject:** RE: Treatability Study CAM

Ben,

As the dewater design concept has advanced, we have focused our treatability study objectives to provide a basis for detailed engineering. That has included interaction with equipment vendors and gaining an understanding of the lab data that they prefer to accompany a spec.

In this instance, the scale of the tests and the procedure outlined in the CAM has been discussed with major equipment vendor GL&V (<http://www.glv.com/>). The 2 L graduated cylinder tests are commonly used to produce data to design thickeners. As evidence, the procedure is described in the following references for the design of thickeners:

- Pearse, M.J., "Laboratory procedures for the choice and sizing of dewatering equipment in the mineral processing industry", Warren Spring Lab (1978)
- SME Mineral Processing Handbook, N.L. Weiss, ed., (1985)
- Mineral Process Engineering, 6th ed., B.A. Wills (1997)
- Reynolds, T.D., Unit Operations and Processes in Environmental Engineering, Brooks/Cole Engineering Division (1982).

Since this is a very established protocol, we are confident that the test will meet our data quality objectives for thickener design.

From a practical perspective, the material that is to be thickened is hydrocyclone overflow. Since the volume of hydrocyclone overflow produced during the hydrocyclone studies is limited, the smaller-scale tests give more opportunity to run more tests and to vary parameters, such as polymer dose.

Regarding the frequency of mudline reading. At the beginning of the test, the descent of the mudline is rapid, so readings are taken at appropriate intervals to be able to determine the slope of the settling curve with time, which is critical for the design analysis (see Pearse (1978)). Perhaps the materials that you are considering in your comment are those with a very wide gradation that haven't been chemically conditioned, such as dredge material that gets pumped to a CDF, which is the topic of EM 1110-2-5027. The conditioned hydrocyclone overflow will have very different settling properties. Therefore, I am not sure if the guidance is directly applicable.

As I previously noted, we did use the 8" diameter columns for the primary sedimentation studies, as described in the Treatability Studies Work Plan (BBL, Feb 2004). The SOP was based on ERDC/EL TR-03-1. These tests were completed on sediment samples which had not been separated and without chemical conditioning. The settling times were consistent with your impression.

If you feel you would like to discuss this further, please give me a call. Have a good weekend.

Regards,

Scott Blaha, P.E.

Subject: Re: Treatability Study CAM

Hi Scott. A few quick thoughts from our team and a question at the end.  
Nothing that should affect the proposed tests.

Two things stand out in the CAM. The first is that the SOP is significantly different from that recommended by the ACOE in Chapter 3 of EM 1110-2-5027 dated Sept. 87. The Corps manual recommends that long tube settling columns with a diameter of 8 inches or so be used rather than the 2 liter graduated cylinder described in the CAM. Secondly, the SOP calls for recording the interface between the solids and relatively clear water in the graduated cylinder at very frequent time interval of from 1 to 5 minutes. Unless the sediment sample is very dilute, a few hours will probably be needed before any measurable change in the height of the interface will be noted (provided any interface forms) and any significant settling will require 12 hours or more.

The Corps manual specifically states that the use of a small cylinder such as GE is proposing is not acceptable for design purposes, as wall effects for columns of small diameter affect zone settling velocities and behavior. Data gathered using a small diameter graduated cylinder will not accurately reflect field behavior.

We were curious as to why the testing for this task is different than the standard Corps testing procedures. Just trying to get a better understanding of why the tests are being run this way.

Thanks.

**Notes:**

1. Samples were collected by Waste Stream Technology, Inc., and were submitted to Northeast Analytical Services, Inc. for analysis.
2. U = Indicates the constituent was not detected. The value preceding the U indicates the laboratory quantitation limit.
3. As specified in the *Treatability Studies Work Plan* (Blasland, Bouck & Lee, Inc. [BBL], 2004), data validation was performed on approximately 10% of the analytical data set.
4. mg/L = milligrams per liter.
5. NA - Not analyzed.
6. **Laboratory Data Qualifiers:**  
 Organics (PCBs)  
 J - Indicates an estimated value less than the practical quantitation limit (PQL).
7. **Sample ID Legend:**
  - FB = field blank.
  - FEED = composite of feed water for the days shown.
  - G1 = single column with Norit carbon.
  - G2 = double column with Norit carbon.
  - P1 = single column with Calgon carbon.
  - P2 = double column with Calgon carbon.
  - Y1 = single blank column.
  - Y2 = double blank column.
8. On 4/27/05, BBL collected a sample of RSSCT feed water and submitted the sample to Severn Trent Laboratories for analysis of mercury. The result was 0.00000051 mg/L total mercury.

## GE Hudson River

### Polymer Testing

S2-2-07 < #200 (15%) slurry at 3.24 % solids used for testing.

All tests were initially treated with 150ppm Developmental E.

Additive and Dosage	Comments
AE 1147 / 5 ppm	No change in floc, settles slower
AE 1147 / 10 ppm	Chunkier floc, settles faster
AE 1147 / 15 ppm	Same as above
AE 1147 / 20 ppm	Better settling speed
AE 1147 / 25 ppm	Same as above
AE 1147 / 30 ppm	Slightly better settling speed
AE 1147 / 35 ppm	Settling slightly slower
AE 1147 / 40 ppm	Settling slightly slower
AE 1115 / 5 ppm	Chunkier floc, settles faster
AE 1115 / 10 ppm	Better settling speed
AE 1115 / 15 ppm	Better settling speed
AE 1115 / 20 ppm	Better settling speed
AE 1115 / 25 ppm	Slightly better settling speed
AE 1115 / 30 ppm	Same as above
AE 1115 / 35 ppm	Same as above
AE 1115 / 40-45 ppm	Same as above
AE 1115 / 50 ppm	Same as above, floc size may be slightly bigger
AE 1115 / 55-75 ppm	Slower settling speed, floc size decreases.
AE 1117 / 5 ppm	Chunkier floc, settles faster
AE 1117 / 10 ppm	Better settling speed
AE 1117 / 15 ppm	Better settling speed
AE 1117 / 20 ppm	Same as above
AE 1117 / 25 ppm	Same as above
AE 1117 / 30 ppm	Same as above
AE 1117 / 35 ppm	Slightly better settling speed
AE 1117 / 40-50 ppm	Slower settling speed, floc size decreases.

Additive and Dosage	Comments
AE 1125 / 5 ppm	Slightly chunkier, slightly faster settling
AE 1125 / 10 ppm	Chunkier floc, settles faster
AE 1125 / 15 ppm	Better settling speed
AE 1125 / 20 ppm	Better settling speed
AE 1125 / 25 ppm	Same as above
AE 1125 / 30 ppm	Slightly better settling speed
AE 1125 / 35 ppm	Same as above
AE 1125 / 40 ppm	Same as above
AE 1125 / 45-50 ppm	Floc size decreases
AE1128P / 5 ppm	No significant change
AE1128P / 10 ppm	Slightly chunkier, slightly faster settling
AE1128P / 15 ppm	Better settling speed
AE1128P / 20 ppm	Same as above
AE1128P / 25 ppm	Same as above
AE1128P / 30 ppm	Better settling speed
AE1128P / 35-50 ppm	Same as above
AE 1138 / 5 ppm	No significant change
AE 1138 / 10 ppm	Chunkier floc, settles faster
AE 1138 / 15 ppm	Slightly better settling speed
AE 1138 / 20 ppm	Same as above
AE 1138 / 25 ppm	Better settling speed
AE 1138 / 30 ppm	Chunkier floc, settles faster
AE 1138 / 35 ppm	Same as above
AE 1138 / 40-50 ppm	Same as above
AE 1138 / 55-75 ppm	Same as above, cloudier supernatant
AE 1700 / 5 ppm	Chunkier floc, settles faster
AE 1700 / 10 ppm	Better settling speed
AE 1700 / 15 ppm	Better settling speed
AE 1700 / 20 ppm	Better settling speed
AE 1700 / 25 ppm	Same as above
AE 1700 / 30 ppm	Better settling speed
AE 1700 / 35-50 ppm	Same as above

Additive and Dosage	Comments
AE 1701 / 5 ppm	Much chunkier floc, settles faster
AE 1701 / 10 ppm	Better settling speed
AE 1701 / 15-35 ppm	Same as above
AE 1701 / 40-50 ppm	Supernatant gets slimy
AE 1702 / 5 ppm	Slightly chunkier floc, settles faster
AE 1702 / 10 ppm	Chunkier floc, settles faster
AE 1702 / 15 ppm	Better settling speed
AE 1702 / 20-50 ppm	Same as above
AE 1703 / 5 ppm	Much chunkier floc, settles faster
AE 1703 / 10 ppm	Better settling speed
AE 1703 / 15-50 ppm	Same as above
CE 2651 / 5 ppm	Slightly chunkier floc, settles faster
CE 2651 / 10 ppm	Better settling speed
CE 2651 / 15-50 ppm	Same as above
CE 2676 / 5 ppm	Chunkier floc, settles faster
CE 2676 / 10-15 ppm	Same as above
CE 2676 / 20 ppm	Slightly chunkier floc, settles faster
CE 2676 / 25-50 ppm	Same as above
CE 2688 / 5 ppm	Chunkier floc, settles faster
CE 2688 / 10-15 ppm	Same as above
CE 2688 / 20 ppm	Slightly chunkier floc, settles faster
CE 2688 / 25-50 ppm	Same as above

# GE Hudson River

## **Slurry Settling Tests - 100 mL Graduated Cylinder**

### **Settling Tests -- Determine Optimum Dose of Coagulant (Dev. E)**

6/14/2005

Used S2-2-07 <#200 (15%) slurry at 3.30% solids for the following settling tests; 100 mL graduated cylinders. Slurry and polymer were mixed by inversion 10 times.

Time	Mudline Level (mL)					
	50ppm Dev. E	100ppm Dev. E	150ppm Dev. E	200ppm Dev. E	400ppm Dev. E	600ppm Dev. E
0:00:00	100	100	100	100	100	100
0:01:00	98	96	94	95	97	98
0:02:00	97	94	89	91	95	96
0:03:00	96	91	81	88	94	95
0:04:00	94	88	73	83	92	93
0:05:00	93	85	67	79	90	92
0:06:00	91	81	61	75	88	91
0:07:00	89	77	56	71	86	90
0:08:00	86	74	53	66	84	88
0:09:00	83	71	50	62	82	87
0:10:00	80	68	48	60	79	85
0:11:00	77	65	46	57	77	84
0:12:00	73	63	44	55	75	82
0:13:00	71	61	43	53	73	81
0:14:00	68	59	42	51	70	80
0:15:00	66	57	41	49	68	78
0:16:00	65	56	41	48	66	77
0:17:00	63	54	40	47	64	76
0:18:00	61	53	39	46	62	74
0:19:00	60	52	39	45	60	73
0:20:00	59	51	38	44	59	72
24:00:00	22.5	27	31	32	32	33

Observations: Supernatant was clear and colorless in the 150ppm, 200ppm, 400ppm, and 600ppm tests. Supernatant in the 100ppm test was clear and colorless with particles clinging to the sides of the graduated cylinder. Supernatant in the 50ppm test was slightly cloudy.

The floc size went as follows:

Chunkiest

Finest

150ppm----100ppm 200ppm----50ppm 400ppm----600ppm

## **Settling Tests -- Determine Optimum Dose of Flocculant**

7/5/2005

Used S2-2-08 <#200 slurry at 3.39 % solids for the following settling tests; 100 mL graduated cylinders used. Slurry and 150 ppm of Developmental E were mixed by inversion 10 times followed by flocculant addition and mixing by inversion 10 times.

Time	Mudline Level (mL)				
	10 ppm CE2676	20 ppm CE2676	30 ppm CE2676	40 ppm CE2676	50 ppm CE2676
0:00:00	100	100	100	100	100

4:33:00	34	36	36	37	37
24:00:00	32	34	35	35	35

Observations: Floc size increases with higher doses of CE2676.

Supernatant is clear with a few floaties on top.

## Settling Tests -- Determine Optimum Dose of Flocculant

7/5/2005

Used S2-2-08 <#200 slurry at 3.39 % solids for the following settling tests; 100 mL graduated cylinders used. Slurry and 150 ppm of Developmental E were mixed by inversion 10 times followed by flocculant addition and mixing by inversion 10 times.

Time	Mudline Level (mL)				
	10 ppm AE1125	20 ppm AE1125	30 ppm AE1125	40 ppm AE1125	50 ppm AE1125

6:00:00	37	37	39	37	39
24:00:00	36	36	38	36	38

Observations: AE1115 supernatant is clear with a few floaties on top. Visually, one of the best.  
AE1117 supernatant is clear with a little sticking on the sides and a few floaties on top.  
AE1128 supernatant is clear with some sticking on the sides and a few floaties on top.  
AE1138 supernatant is clear with some sticking on the sides and a few floaties on top.  
AE1700 supernatant is clear with chunks sticking on the sides and a few floaties on top.

## Bench Filter Press Data Sheet

Test Number: BFP OF SS 01

Slurry ID: S2-2-HC-15-2 OF SS

Feed Solids: 10.94

Sample Volume: 1000 mL

Polymer ID: Developmental "E"

Dosage: 100ppm

Date/Time: 04/19/05 1500

Tech: JL

Press Time: 60 min

Max. Pressure: 100 psi

Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Volume (mL)	Filtrate Observations
2	25	12	Initial sediment discharge
4	50	10	Cloudy, possibly residual sediment from ISD
6	100	7	Slightly cloudy
60	100	85	Clear, colorless

Filter Cake Quality: Incomplete, cake wall formed but was liquid in the middle.

Release from Cloth: Good, slight blinding.

% Solids (w/w): NA

Additional Comments: Additional press time / polymer may be necessary

## Bench Filter Press Data Sheet

Test Number: BFP OF SS 11

Slurry ID: S2-2-HC-15-2 OF SS

Feed Solids: 10.94

Sample Volume: 500mL

Polymer ID: Developmental "E"

Dosage: 1500ppm

Date/Time: 4/21/05 1120

Tech: JL

Press Time: 60 min

Max. Pressure: 100 psi

Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Volume (mL)	Filtrate Observations
2	25	37	No initial sediment discharge, clear slightly yellow
4	50	26	Clear slightly yellow
6	100	20	Clear slightly yellow
60	100	200	Clear slightly yellow

Filter Cake Quality: Good, slightly soft top

Release from Cloth: Good, no blinding

% Solids (w/w): 47.47

Additional Comments:

## Bench Filter Press Data Sheet

Test Number: BFP OF SS 12

Slurry ID: S2-2-HC-15-2 OF SS

Feed Solids: 10.94

Sample Volume: 500mL

Polymer ID: Developmental "E"

Dosage: 900 ppm

Date/Time: 4/22/05 1000

Tech: JL

Press Time: 120 min

Max. Pressure: 100 psi

Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Volume (mL)	Filtrate Observations
2	25	25	No initial sediment discharge, clear very slightly yellow
4	50	16	Clear very slightly yellow
6	100	15	Clear very slightly yellow
60	100	207	Clear yellow

Filter Cake Quality: Good, soft top

Release from Cloth: Good, no blinding

% Solids (w/w): 48.14

Additional Comments:

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP OF SS 13

Slurry ID: S3-4-HC-15-1 OF SS

Feed Solids: 14.45

Sample Volume: 500mL

Polymer ID: Developmental "E"

Dosage: 1000ppm

Date/Time: 4/22/05 1010

Tech: JL

Press Time: 120 min

Max. Pressure: 100 psi

Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Volume (mL)	Filtrate Observations
2	25	25	No initial sediment discharge, clear, colorless
4	50	14	Clear, very slightly yellow
6	100	15	Clear, very slightly yellow
60	100	165	Slightly cloudy, yellow

Filter Cake Quality: Very good, slightly soft top

Release from Cloth: Good, no blinding

% Solids (w/w): 54.59

Additional Comments:

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP OF SS 14

Slurry ID: S3-4-HC-25-2 OF SS

Feed Solids: 21.15

Sample Volume: 500mL

Polymer ID: Developmental "E"

Dosage: 1800ppm

Date/Time: 4/22/05 1315

Tech: JL

Press Time: 120 min

Max. Pressure: 100 psi

Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Volume (mL)	Filtrate Observations
2	25	16	No initial sediment discharge, clear, slightly yellow
4	50	10	Clear, slightly yellow
6	100	10	Clear, slightly yellow
60	100	100	Clear, yellow

Filter Cake Quality: Fair, soft/slightly wet center

Release from Cloth: Good, no blinding

% Solids (w/w): 54.39

Additional Comments:

BFP-181	S2-2-08 < #100	14.35	Dev "E"	500	120 min / 100 psi	68.04	Excellent

Blew through at 105 min.

Test ID	Slurry ID	Feed % Solids	Polymer	Dose (ppm)	Time / Pressure	Cake % Solids	Cake Quality
BFP-168	S2-2-07 < #100	3.84	Dev "E"	500	60 min / 100 psi	46.13	Fair
BFP-174	S2-2-07 < #100	3.84	Dev "E"	500	60 min / 100 psi	--	Very Poor
BFP-175	S2-2-07 < #100	3.84	Dev "E"	500	120 min / 100 psi	55.06	Good
BFP-184	S2-2-07 < #400	3.84	Dev "E"	500	180 min / 100 psi	43.60	Good

Coarse solids drop out in feed chamber, sample not filter pressing properly. BFP 175 blew through at 78 min. Attempt fast mix in chamber for future presses w/ this feed.

Very clogged neck in cake chamber -- suspect flow to cake chamber was blocked.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-168

Slurry ID: S2-2-07 <#100  
Feed Solids: 3.84%  
Sample Vol.: 1.5 L  
Date/Time: 6/1/05 1220  
Tech: SC

Polymer ID: Developmental E  
Dosage: 500 ppm  
Press Time: 60 min  
Max. Pressure: 100 psi  
Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	210	210	Sediment in initial discharge. Clear, colorless
4	50	98	308	Clear, colorless
6	100	76	384	Clear, colorless
60	100	945	1329	Clear, colorless

Filter Cake Quality: Fair

Release from Cloth: Good, some sticking, little bit of blinding

% Solids (w/w): 46.13

Additional Comments: Cake had a wet top and middle.  
Feed did not press properly -- coarse solids drop out in feed chamber.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-169

Slurry ID: S2-2-07 <#200      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 500 ppm  
Sample Vol.: 1.5 L      Press Time: 60 min  
Date/Time: 6/1/05 1240      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	118	118	Sediment in initial discharge. Clear, colorless
4	50	58	176	Clear, colorless
6	100	46	222	Clear, colorless
60	100	390	612	Clear, colorless

Filter Cake Quality: Good

Release from Cloth: Good, no blinding

% Solids (w/w): **48.85**

Additional Comments: Firm cake with a soft spot on top. Partially clogged neck.

Date/Time: 6/3/2005 0850      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	59	59	Sediment in initial discharge. Clear, colorless
4	50	50	109	Clear, colorless
6	100	50	159	Clear, colorless
60	100	140	299	Clear, colorless

Filter Cake Quality: Excellent

Release from Cloth: Very good, no blinding

% Solids (w/w): **68.04**

Additional Comments: Cake was hard throughout. Very clogged neck.  
Filtrate flow ceased at 1:10.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-182

Slurry ID: S2-2-08 <#100      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 500 ppm  
Sample Vol.: 1.5 L      Press Time: 60 min  
Date/Time: 6/3/2005 1010      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	302	302	Sediment in initial discharge. Clear, colorless
4	50	162	464	Clear, colorless
6	100	129	593	Clear, colorless
60	100	772	1365	Clear, colorless

Filter Cake Quality: Very good

Release from Cloth: Good, some sticking, no blinding

% Solids (w/w): **58.93**

Additional Comments: Solid cake with a soft top into middle. Soft clog in neck.  
Feed was mixed at high speed to suspend coarse solids.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-183

Slurry ID: S2-2-07 <#200      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 500 ppm  
Sample Vol.: 2 L      Press Time: 180 min  
Date/Time: 6/3/2005 1010      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	110	110	Sediment in initial discharge. Clear, colorless
4	50	48	158	Clear, colorless
6	100	45	203	Clear, colorless
180	100	371	574	Clear, colorless

Filter Cake Quality: Very good

Release from Cloth: Very good release, no blind

% Solids (w/w): 56.71

Additional Comments: Very clogged neck.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-184

Slurry ID: S2-2-07 <#400      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 500 ppm  
Sample Vol.: 2 L      Press Time: 180 min  
Date/Time: 6/3/2005 1020      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	81	81	Sediment in initial discharge. Clear, colorless
4	50	39	120	Clear, colorless
6	100	29	149	Clear, colorless
180	100	200	<b>349</b>	Clear, colorless

Filter Cake Quality: Good

Release from Cloth: Very good, no blind

% Solids (w/w): **43.60**

Additional Comments: Cake was consistent throughout, slightly soft.  
Very clogged neck.

## Bench Filter Press Data Sheet

Test Number: BFP-185

Slurry ID: S2-2-08 <#100      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 200 ppm  
Sample Vol.: 1.5 L      Press Time: 60 min  
Date/Time: 6/3/2005 1500      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	165	165	Clear, colorless
4	50	91	256	Clear, colorless
6	100	86	342	Clear, colorless
180	100	772	1114	Clear, colorless

Filter Cake Quality: Very good

Release from Cloth: Very good, no blinding

% Solids (w/w): 60.22

Additional Comments: Cake was solid with a soft top. Soft clog in neck.  
Feed was mixed at high speed to suspend coarse solids.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-186

Slurry ID: S2-2-07 <#200  
Feed Solids: 3.84%  
Sample Vol.: 1.5 L  
Date/Time: 6/3/2005 1500  
Tech: SC

Polymer ID: Developmental E  
Dosage: 200 ppm  
Press Time: 60 min  
Max. Pressure: 100 psi  
Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	91	91	Clear, colorless
4	50	42	133	Clear, colorless
6	100	38	171	Clear, colorless
180	100	330	501	Clear, colorless

Filter Cake Quality: Good

Release from Cloth: Very good, no blinding

% Solids (w/w): 48.33

Additional Comments: Cake had a very soft top. Soft clog in neck.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-187

Slurry ID: S2-2-07 <#400      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 200 ppm  
Sample Vol.: 1.5 L      Press Time: 60 min  
Date/Time: 6/3/2005 1500      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	54	54	Clear, very slight yellow
4	50	34	88	Clear, colorless
6	100	32	120	Clear, colorless
180	100	265	385	Clear, colorless

Filter Cake Quality: Fair

Release from Cloth: Very good, no blinding

% Solids (w/w): 39.52

Additional Comments: Cake had a very soft top and center.

Test Number: BFP-188

Slurry ID: S2-2-08 <#400      Polymer ID: Developmental E  
Feed Solids: 3.84%      Dosage: 500 ppm  
Sample Vol.: 2 L      Press Time: 180 min  
Date/Time: 6/8/2005 1335      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	68	68	Clear, colorless
4	50	48	116	Clear, colorless
6	100	38	154	Clear, colorless
180	100	357	511	Clear, colorless

Filter Cake Quality: Very good

Release from Cloth: Very good, no blinding

% Solids (w/w): 52.35

Additional Comments: Cake was firm throughout. Clogged neck.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-189

Slurry ID: S2-2-08 <#100      Polymer ID: Developmental E  
Feed Solids: 5.00%      Dosage: 500 ppm  
Sample Vol.: 2 L      Press Time: 180 min  
Date/Time: 6/8/2005 1340      Max. Pressure: 100 psi  
Tech: SC      Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	217	217	Clear, colorless
4	50	93	310	Clear, colorless
6	100	86	396	Clear, colorless
180	100	587	983	Clear, colorless

Filter Cake Quality: Excellent

Release from Cloth: Good, some sticking, no blinding

% Solids (w/w): **68.53**

Additional Comments: Very hard, dry cake. Very clogged neck.  
Feed was mixed at high speed to suspend coarse solids.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-190

Slurry ID: S2-2-08 <#100  
Feed Solids: 10.00%  
Sample Vol.: 2 L  
Date/Time: 6/8/2005 1345  
Tech: SC

Polymer ID: Developmental E  
Dosage: 500 ppm  
Press Time: 180 min  
Max. Pressure: 100 psi  
Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	105	105	Clear, colorless
4	50	66	171	Clear, colorless
6	100	62	233	Clear, colorless
180	100	139	372	Clear, colorless

Filter Cake Quality: Excellent

Release from Cloth: Very good, very slight sticking, no blinding

% Solids (w/w): 70.98

Additional Comments: Very hard, dry cake. Very clogged neck.  
Feed was mixed at high speed to suspend coarse solids.

# Hudson River Treatability Study

## Bench Filter Press Data Sheet

Test Number: BFP-191

Slurry ID: S2-2-07 <#200 (15%) SS      Polymer ID: Developmental E  
Feed Solids:  
Sample Vol.: 1 L      Dosage: 600 ppm  
Date/Time: 6/9/2005 1410      Press Time: 60 min  
Tech: SC      Max. Pressure: 100 psi  
Filter Cloth: Crosible 85x/5

Time (min)	Pressure (psi)	Filtrate Vol. measured (mL)	Total Filtrate Volume (mL)	Filtrate Observations
2	25	69	69	Clear, colorless
4	50	39	108	Clear, colorless
6	100	35	143	Clear, colorless
60	100	222	365	Clear, colorless

Filter Cake Quality: Very good

Release from Cloth: Very good, no blinding

% Solids (w/w): 55.20

Additional Comments: Cake was firm throughout. Clogged neck.  
Feed was the settled solids recovered after settling tests on S2-2-07 <#200, 3.24% solids.  
Polymer was added for settling test; no additional polymer was added prior to filter press test.

\*-RSSCT effluent water used to make feed batch

Batches using 1.96 lbs of sediment were dosed with 10ppm Dev "E"

Batches using 4.00 and 8.00 lbs of sediment were dosed with 20ppm Dev "E"

All batches up to and including 6/23/05 were mixed for 60 min, dosed with Dev "E", and settled for 40 min prior to decanting.

Batches starting with 070105 were heated to 50-60C and mixed for 24hrs

## Hudson River

### RSSCT Notes and Observations

Date	Time	Observation																												
4/26/2005	0830-0930	Feed Batch 04/25/05 added to feed drum 10:21:00 RSSCT started 16:58:00 Pump setting adjusted from 588 to 570, based on observed flow rates																												
4/27/2005	8:25:00	Flow check P1 - 6.8 mL/min G2 - 6.1 mL/min																												
4/28/2005	0815-0915	Feed Batch 04/27/05 added to feed drum 8:35:00 Pump setting adjusted from 570 to 560, based on email from Brian Moore																												
4/29/2005		815 Column G1 observed to have stopped flowing. Column P1 observed to be flowing at approximately 1/2 of expected flow. 9:30:00 Pump stopped Feed tubes for columns P1 and G1 moved to different locations on the pump head 9:37:00 Pump restarted Flow on both columns appeared to be OK Buckets of waste water from each column were weighed to determine effluent volume since last sampling.																												
		<table border="1"><thead><tr><th></th><th>Weight (kg)</th><th>Time (min)</th><th>Flow rate (mL/min)</th></tr></thead><tbody><tr><td>P1</td><td>5.68</td><td>1308.50</td><td>4.34</td></tr><tr><td>Y1</td><td>7.40</td><td>1303.00</td><td>5.68</td></tr><tr><td>G1</td><td>3.45</td><td>1304.50</td><td>2.64</td></tr><tr><td>P2</td><td>6.62</td><td>1303.00</td><td>5.08</td></tr><tr><td>Y2</td><td>5.77</td><td>1309.50</td><td>4.41</td></tr><tr><td>G2</td><td>7.16</td><td>1298.00</td><td>5.52</td></tr></tbody></table>		Weight (kg)	Time (min)	Flow rate (mL/min)	P1	5.68	1308.50	4.34	Y1	7.40	1303.00	5.68	G1	3.45	1304.50	2.64	P2	6.62	1303.00	5.08	Y2	5.77	1309.50	4.41	G2	7.16	1298.00	5.52

5/2/2005	15:43:00	Pump stopped New pump tubing installed, lint clogs in influent tubing removed.																												
	15:53:00	Pump restarted																												

Flow appears to be equal among all columns  
 Effluent weights 5/1/05, ~1300 to 5/02/05, 1644

	Weight (kg)	Time (min)	Flow rate (mL/min)
P1	9.90	1659.50	5.97
Y1	2.95	1658.75	1.78
G1	10.16	1700.25	5.98
P2	1.92	1658.00	1.16
Y2	2.19	1657.50	1.32
G2	0.98	1657.00	0.59

5/3/2005 8:35:00 Effluent weights 5/02/05, 1644 to 5/03/05, 0835

	Weight (kg)	Time (min)	Flow rate (mL/min)
P1	6.54	951.00	6.88
Y1	6.63	952.75	6.96
G1	6.57	953.25	6.89
P2	6.43	954.25	6.74
Y2	6.53	954.50	6.84
G2	6.37	954.75	6.67

1600-1640 Remaining feed from batch 042905 added to feed drum, ~25 gal

5/4/2005 9:40:00 Slight discoloration in top ~3 cm of glass wool columns  
 Lint/fibers observed in pump influent lines.

1614-1637 Water from feed batch 050305 added to feed drum, ~20 gal

16:37:30 Pump adjusted from 560 to 550, as per Brian Moore

5/6/2005 0937-1015 Remaining feed from batch 050305 added to feed drum, ~25 gal  
 15:37:00 Pump stopped

Lint accumulation removed

15:47:00 Pump restarted

5/7/2005 1217-1240 Water from feed batch 050605 added to feed drum, ~20 gal

5/9/2005 0846-0855 Remaining feed from batch 050605 added to feed drum, ~25 gal

5/10/2005 9:09:00 Pump stopped  
 Lint accumulation removed

9:16:00 Pump restarted

10:17:30 Pump adjusted from 550 to 545, as per Brian Moore

1500 Replaced ice blankets with ice bath

1640-1700 Water from feed batch 051005 added to feed drum, ~20 gal

5/11/2005 1140-1200 Remaining feed from batch 051005 added to feed drum, ~25 gal

5/12/2005 830 Significant discoloration of all glass wool columns

5/13/2005 8:59:00 Pump adjusted from 545 to 540, as per Brian Moore

1154-1228 Water from feed batch 051205 added to feed drum, ~30 gal

14:15:00 Pump stopped

Lint accumulation removed

14:21:00 Pump restarted

5/15/2005 0838-0906 Remaining feed from batch 051205 added to feed drum, ~15 gal

5/16/2005 1523-1610 Feed batch 051305 added ~45 gal

5/17/2005 13:45:00 Pump stopped  
 Lint accumulation removed

13:53:00 Pump restarted

5/19/2005 1150-1231 Water from feed batch 051805 added to feed drum, ~35 gal

5/20/2005 0830-0845 Remaining feed from batch 051805 added to feed drum,. ~10 gal  
 14:54:00 Pump stopped  
     Lint accumulation removed  
 14:59:00 Pump restarted  
 16:40:30 Pump adjusted from 540 to 535, as per Will Stephan  
 5/22/2005 0940-0947 Water from feed batch 052005 added to feed drum, ~10 gal  
     1233-1248 Water from feed batch 052005 added to feed drum, ~15 gal  
 5/23/2005 1201-1228 Remaining feed from batch 052005 added to feed drum,. ~20 gal  
 5/24/2005 1345-1405 Water from feed batch 052405 added to feed drum, ~20 gal  
 5/25/2005 1618-1655 Remaining feed from batch 052405 added to feed drum,. ~25 gal  
 5/27/2005 14:52:00 Pump stopped  
     Lint accumulation removed  
 14:59:00 Pump restarted  
     1500-1540 Water from feed batch 052705 (1) added to feed drum, ~30 gal  
 5/29/2005 1219-1241 Remaining feed from batch 052705 (1) added to feed drum,. ~15 gal  
     1241-1306 Water from feed batch 052705 (2) added to feed drum, ~20 gal  
 5/31/2005 1140-1212 Remaining feed from batch 052705 (2) added to feed drum,. ~25 gal  
     16:55:00 Pump adjusted from 535 to 530, as per Brian Moore  
 6/1/2005 1520-1542 Water from feed batch 060105 added to feed drum, ~15 gal  
 6/2/2005 1642-1700 Water from feed batch 060105 added to feed drum, ~15 gal  
 6/3/2005 1205-1221 Remaining feed from batch 060105 added to feed drum, ~10 gal  
     16:18:00 Pump stopped  
     Lint accumulation removed  
     16:23:00 Pump restarted  
     1631-1648 Water from feed batch 060305 added to feed drum, ~15 gal  
 6/5/2005 1515-1540 Water from feed batch 060305 added to feed drum, ~20 gal  
 6/6/2005 1407-1425 Remaining feed from batch 060305 added to feed drum, ~10 gal  
 6/7/2005 1410-1450 Water from feed batch 060605 added to feed drum, ~25 gal  
 6/9/2005 1247-1316 Remaining feed from batch 060605 added to feed drum, ~20 gal  
 6/10/2005 1213-1245 Water from feed batch 060905 added to feed drum, ~35 gal  
     13:58:00 Pump stopped  
     Lint accumulation removed  
     14:03:00 Pump restarted  
 6/12/2005 1111-1135 Remaining feed from batch 060905 added to feed drum, ~15 gal  
 6/13/2005 0837-0849 Water from feed batch 061005 added to feed drum, ~10 gal  
     1351-1433 Remaining feed from batch 061005 added to feed drum, ~35 gal  
 6/15/2005 1213-1241 Water from feed batch 061305 added to feed drum, ~20 gal  
 6/16/2005 1350-1426 Remaining feed from batch 061305 added to feed drum, ~25 gal  
 6/17/2005 14:23:30 Pump stopped  
     Lint accumulation removed  
     14:29:00 Pump restarted  
     1519-1539 Water from feed batch 061605 added to feed drum, ~15 gal  
 6/19/2005 1309-1340 Remaining feed from batch 061605 added to feed drum, ~30 gal  
 6/20/2005 1130 **Possible algae growth noted on walls of feed drum.**  
 6/21/2005 0815-0825 Water from feed batch 062005 added to feed drum, ~10 gal  
     1125-1135 Water from feed batch 062005 added to feed drum, ~10 gal  
 6/22/2005 1135-1205 Remaining feed from batch 062005 added to feed drum, ~25 gal  
     14:41:00 Pump stopped  
     Lint accumulation removed  
     Pump head tubing shifted  
     14:48:00 Pump restarted
